Container and Service Tracking:

Leveraging Data to Efficiently Manage Your Assets

C.A.R.T.S. – The Technology Advantage

You need to know where, when and how your containers are being deployed, maintained and replaced. Rehrig Pacific has responded to these needs by developing the Container Asset Recovery Tracking System (C.A.R.T.S.). This proprietary Internet-based software tool brings all of this information to you whenever you need it. C.A.R.T.S. makes it possible for the Environmental Services Group to implement a wide variety of services that are designed to inform our customers in a timely manner and at a minimal cost.

(More information on back)

The technology is new, but the concepts remain the same:

- **Quality service**
- **State-of-the-art products**
- **Innovative solutions**
- **Customer satisfaction.**

The Environmental Services Group

The Environmental Services Group is ready to serve as your trusted guide in bringing the power of data management to your operation. With our assistance you can quickly and easily manage:

- Container inventories
- Distribution programs that link each container ID to a customer address
- Container maintenance programs and work order data
- Collection data tracking with radio frequency identification (RFID) and bar code integration.

RFID & Bar Code Integration

Rehrig Pacific has the ability to integrate RFID and bar code technology into every container:

- A serial number and bar code are imprinted on the containers
- A RFID tag is imbedded into the container to protect it from weather and other harsh elements
- The RFID tag and bar code are scanned and linked at the manufacturing work cell
- A database with each container's serial number and RFID tag value is provided as a foundation for future service offerings.

Existing containers in your system can also be retrofitted with bar codes and RFID tags making it easy to include them in your new C.A.R.T.S. database.

The Power of Data Will Change Your World

C.A.R.T.S. – The Technology Advantage

C.A.R.T.S., Rehrig Pacific's unique Internet-based asset and inventory management software, can be customized to the specific needs and requirements of our customers. Once your address database is uploaded to C.A.R.T.S., the Environmental Services Group can help implement a variety of services, including:

- Residential Surveys: designed to gather feedback on services, determine interest in new programs, or select a container size
- Delivery & Inventory Management: track the progress of container shipments and manage inventory levels at your distribution centers
- Container Distribution: record container deliveries in real time by using handheld scanners in conjunction with C.A.R.T.S.
- Monitor Container Distribution Progress: generate daily distribution reports that include household address, container serial number, RFID tag number, type, size, date and time of delivery
- Ongoing Container Maintenance: integrate maintenance work order systems with C.A.R.T.S. to track container inventories, repairs, and work flow
- Collection Data Tracking Services: integrate RFID technology and data collection equipment on trucks to accurately track container collection data and provide customized participation reports produced through C.A.R.T.S.

Electronic tracking gives our customers the power they need to better manage their container assets, drive new services, and improve their customer retention and satisfaction rates.

RFID & Bar Code Integration

Bar codes and serial numbers are typically used to record container delivery or document maintenance work orders. RFID tags are utilized to record container collection data for refuse and recycling programs.

Container programs that utilize RFID and bar code technology can bring several advantages to your operation:

- Gain instant access to a container's history with a simple scan
- Log and track container movement in a centralized database
- Manage inventories and container maintenance programs
- Associate bar code and RFID information with a specific customer
- Accurately track collection data, including household participation in recycling and refuse programs.

To find out how Rehrig can give your program a new edge, call us today.
