The new Castle Crate "Wave" has something special for everyone.

When a product is handled by as many different people as a beverage crate is, there are many distinct needs to consider. From bottling plant to point-of-sale and back again, each step in the handling process must be analyzed and the design refined for optimum performance. That's where Rehrig Pacific's unparalleled years of experience pays off.

Bottlers like the improved bottle stability and greater nestability provided by the new taller castles. Smooth, rounded surfaces encourage fully automated crate denesting, resist dirt build-up and clean easily. Large windows allow convenient UPC scanning while logos are protected on recessed panels.

Route Drivers appreciate the ergonomic advantages of our patented "palm-up/palm-down" handles. Wrist strain is greatly reduced when lifting or stacking crates. Our Twist'N Slide bottom, also patented, builds secure pallets, protects bottle closures and speeds unloading and display building. This leaves drivers more selling time with customers.

Store Managers and Route Salesmen know that attractive displays sell more product. They especially appreciate how highly-visible displays can be set up quickly anywhere in the store. It's even easy to face the labels after the crates are stacked.

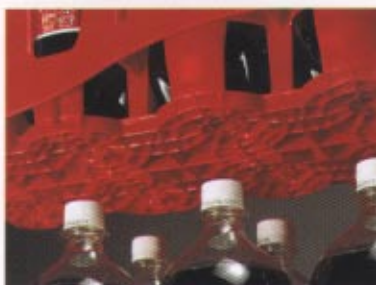

Customers are attracted to the bold and bright displays. The Wave Crate incorporates Coke's famous logo in a striking design. Large display windows frame both the bottle label and profile. Recyclable HDPE resin and available non-heavy metal colors make everyone appreciate the outstanding benefits of Rehrig's latest design.

Large windows allow easy UPC scanning. Taller castles improve bottle stability.

"Palm-up/Palm-down" handles makes lifting easier and safer with less wrist strain on drivers and stockers.

Bottle closures won't hang up with our patented Twist'N Slide bottom. Crates and bottles are securely interlocked when stacked.

Molded in "wave" shape reinforces Coke's eye catching logo. Display windows highlight bottle labels and profile.
