

Unlike most transport packaging suppliers, Rehrig can pair reusable transport packaging with wood pallet and recycling services to help you eliminate your capital expense and maximize the value of your recyclable material.

Here's How It Works

- Rehrig delivers a load of reusable transport packaging.
- Rehrig places a drop trailer at your location that will be loaded with wood pallets, baled corrugate, baled plastic or other recyclable materials.
- Rehrig will take the materials back to our local facility and weigh them.
- Rehrig will use these assets to help cover the capital expense of the reusable transport packaging. Once this initial cost is covered, Rehrig will either pay you directly for these materials or credit you toward the next purchase of reusable transport packaging.

The Rehrig Advantage

- Integrate a highly durable, cost-effective reusable transport package into your supply chain.
- Increase recyclable material value and decrease reusable asset pricing by back hauling materials.
- Free up dock spaces by live loading recyclable materials.
- Increase the frequency of material pickups by taking partial trailer loads.
- Pay you directly or credit you towards the purchase of pallets and reusable transport packaging.
- Can accept cardboard, plastic containers, stretch film, wood scrap, office paper, metals, glass and mixed plastics.
- Can accept mixed loads of recyclables and pallets.
- Uses the PARTS Tracking system to log all of your pallet loads and recyclable materials.
