

With over nine decades of material handling experience, Rehrig Pacific has skillfully employed the advantages of high-pressure injection molding to produce an exceptionally strong, yet lightweight, nestable Delivery Pallet. This gives us the ability to increase wall-thickness in areas susceptible to impact and reinforce areas of the pallet that receive the most abuse, like legs and leading edges.

The 29" x 42" Delivery Pallet is designed for the fastest moving cases and safely fits through small doorways in stores. The size was optimized for fully unassisted deliveries from the distribution center right into the back of the store where limited space is a factor. The Delivery Pallet replaces carts, cages and conveyors currently used for deliveries into these stores.

In freezer applications, our special HDPE resin formulation provides superior impact resistance. Multiple ergonomic handles and effective edge lips are additional features that protect your product and promote safe handling when using the nestable Delivery Pallet.

29" x 42" Nestable Delivery Pallet

Features:

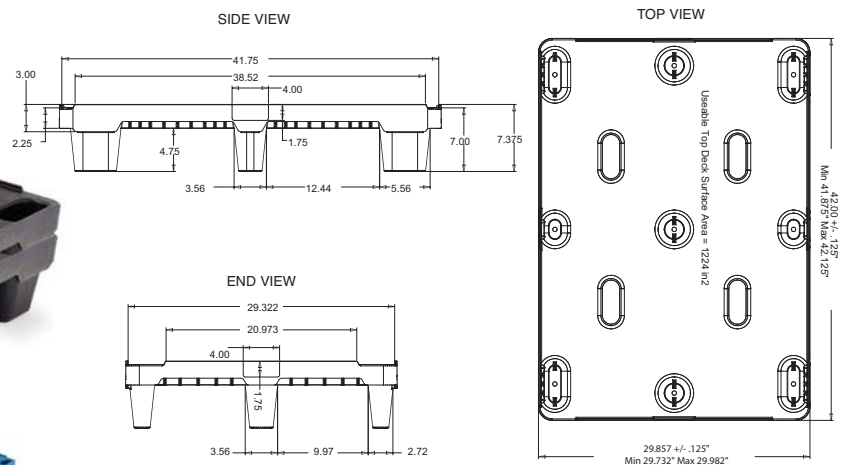

- Highly nestable design saves warehouse space needed for idle pallet storage and cargo space on backhauls: 1,496 pallets fit into a 53' trailer
- Full 7" deck height conforms with food handling requirements and the 4.75" clearance facilitates good ventilation in freezers
- Efficiently cubes out trailers, especially those with center-divide loading
- Lightweight, only 23.5 lbs., with ergonomic handles that ease and promote safe handling practices
- Flow-through design allows easy access for cleaning and draining potential trap points

Material:

- High-density polyethylene (HDPE) resin with superior impact performance for freezer applications

Options:

- Hot stamped custom logos
- Imprinted barcodes which eliminate need for adhesive labels
- RFID tags and full RFID integration available. Contact us for details.
