

Every. Bottle. Back.

Building Partnerships for a Better Planet

As a partner to both the Waste and Recycling industry and the Beverage industry, Rehrig Pacific is uniquely suited to help close the loop for our customers. We have taken a leading role in developing products that utilize high levels of Post-Consumer Recycled Material, including PET Caps and Labels for which it can be challenging to find a home.

We can include up to 10% PET Cap and Label content and 40% PCR material into the beverage shells that take bottles back to the stores.

Those shells can make hundreds of trips before needing to be recycled at the end of their life, ensuring that no plastic is wasted, and eliminating the need for single-use material such as shrink film and cardboard. At the end of their lives, these shells will be reground into new items such as recycling carts.

Utilizing our network of over 30 recycling facilities located across the country, we can help our customers create a circular economy, finding sustainable solutions that meet their needs.

Contact Rehrig Pacific to learn more about how we can create a zero-waste world together.
